$$\text{Avg Test} = \frac{86 + 90 + 92 + 80}{4} = 87$$

$$\begin{aligned} .75(87) + .25x &= 85 \\ 65.25 + .25x &= 85 \\ .25x &= 19.75 \\ x &= 79 \end{aligned}$$

45. A teacher counts the final exam as 25% of each student's class grade. The remaining 75% is the mean of the student's test scores from the semester. Jaleesa's test scores for the semester are 86, 90, 92, and 80. What is the minimum score Jaleesa must get on the final exam to have a class grade of 85.0 or higher?

a. 77 b. 79 c. 81 d. 83

$$X = 79$$

46. Two sides of a triangle measure 10 inches and 13 inches. The included angle between these sides is 55° .

What is the approximate measure of the third side of the triangle?

a. 10.9 inches b. 11.2 inches c. 13.9 inches d. 16.2 inches

$$b^2 = 10^2 + 13^2 - 2(10)(13)\cos 55^\circ$$

$$b^2 = 119.827$$

$$b = 10.9$$

47. The third term of a geometric sequence is 96, and the fifth term is 1,536. What is the sum of the first ten terms of this sequence?

a. 4,092 b. 1,572,864 c. 2,097,150 d. 33,554,400

$$\begin{aligned} a_3 &= 96 \\ a_5 &= 1536 \end{aligned}$$

gap! → system

$$\begin{aligned} 1536 &= 96r^2 \\ 16 &= r^2 \\ r &= 4 \end{aligned}$$

$$1536 = a_1(4)^4$$

$$1536 = 256a_1$$

$$a_1 = 6$$

48. The table below shows the estimated average hours each person in a city spent playing video games in different years:

Years Since 2002	Hours
0	71
1	80
2	82
3	78
4	80
5	91
6	107
7	121
8	125
9	131
10	142

$$a) y = 68.48582287(1.074188144)^x$$

b) base = 1.074188144 since > 1
then city is growing (increasing) w/ # of hrs of people playing videogames

c) coefficient = 68.48582287 → initial amt of people playing videogames in 2002

$$\begin{aligned} 3) S_{10} &= \frac{6(1-4^{10})}{(1-4)} \\ &= 2097150 \end{aligned}$$

- a.) Write an equation for the best fit exponential model for the data.
b.) What is the meaning of the base of the model in the context of the problem?
c.) What is the meaning of the coefficient of the model in the context of the problem?

49. Students are told that attending class regularly will help improve their scores in that class. Below are the scores for students who did attend class regularly and scores for those who did not.

①

Attended Class Regularly				
241	261	271	282	296
243	262	272	284	296
254	267	278	292	308
252	264	276	290	310

②

Did Not Attend Class Regularly			
185	195	195	228
250	256	225	261
274	277	308	233

$$\begin{aligned} 1) \text{ mean} &= 274.95 \\ \text{median} &= 274 \end{aligned}$$

$$\begin{aligned} 2) \text{ mean} &= 242.5 \\ \text{median} &= 241.5 \end{aligned}$$

- a.) Which group of students has a larger mean score and by how much?
b.) Which group of students has a larger median score and by how much?

a.) Attend class reg. has larger mean by 34.37.
b.) Attend class reg. has larger median by 32.5
